

Name _____

Date _____

Computer

A computer is a machine. It makes work easy for us. We can use it to solve problems, make calculations or talk to our friend.

The parts of the computer that you can see and touch are called the Hardware of the computer. These include the screen, keyboard, mouse, CPU and printer.

The keyboard is used to type and enter data to the computer. The CPU uses that data to perform the task that we need to have done. It displays the results on the screen, from which we can see and read. We use the mouse to move the pointer or switch to a different window. A printer is used to print out the results on a sheet of paper to be used afterwards. Look at your computer and ask your parents to show you these hardware parts of the computer.

Computers have made life easy for all of us. No longer do we have to spend a lot of time solving difficult problems, the computer can solve it in a few seconds. Also, they are always correct and accurate and never make any errors in their calculations.

Computer

Answer the following questions.

1. What can we do with a computer?

2. What are the hardware parts of the computer?

3. Name any three hardware.
